# Weather Key Points

Regional Operations Center

Western Region

Wednesday, July 6

- Much more comfortable temperatures will remain in place across much of the state through late week, with mainly minor heat risk concerns. Notably hotter temperatures will again build over much of the state into the weekend and first half of next week, especially for areas just inland.
  - Moderate to even locally high heat risk impacts are forecast to redevelop across much of inland California by the weekend and next week
- Much like the past few weeks, breezy conditions will be noted most afternoons and evenings across the state through at least early next week, particularly in and near the mountains, foothills, and southern deserts. These winds will bring locally elevated fire weather conditions.
  - At this time, widespread critical fire weather conditions remain unlikely over the next 7 days
- Dry weather is also expected through at least early next week, with the exception of far northern California where a few scattered showers will be seen through Wednesday afternoon

**No widespread significant precipitation is forecast across the state through Friday**

**Note:** Forecast precipitation amounts are an average for any particular location. Thunderstorms may produce locally higher rainfall amounts.

**Precipitation (inches)**
